

The Young's new toy and some work on their car.

I have purchased a new and useful "Toy" for my remote garage to help me with doing any under carriage work on either of my MG'S.

It is a 2 post hydraulic vehicle lift (max 6,000 lbs) from MaxJax. It took me one weekend to go thru the boxes/parts and put together the lift posts hydraulic lines, wheels, etc. and the lift motor lines and the cart for the motor and hydraulic line storage.

I'm pretty sure the key to start the car does not go there.
